# Sunita Williams *Riding High*

Space is a great avenue where people work together, and the International Space Station is a great example of that, where 16 countries are working together," Indian American astronaut Sunita L. Williams said during a video conference beamed from space to an audience at the American Center in New Delhi on January 10. Williams, the flight engineer for Expedition 14, currently at the space station, is shown (above) working in its Destiny laboratory and during a space walk to reconfigure the electrical wiring on the Space Shuttle (right). Expedition 14 Commander Robert L. Curbeam and NASA Space Station Science Officer Michael E. Lopez-Alegria are in the background.
